

Seito Pre-ordering Management System

Enhancing table turnover rate and revenue

Seito Pre-ordering Management System provides you an effective tool for business operation and increases your revenue. While waiting for dining tables, customers can place their order in advance by using the system installing near reception area. They will get an order receipt and when they get the table, they can simply provide the order receipt to the server. By scanning the barcode on the receipt, the order will be confirmed in the restaurant system directly.

Pre-order Flow

Features

- Touch screen operation – easy to use
- Food items grouped by categories – hassle-free ordering process by customers themselves
- Show food photos on item buttons – clear display of food items
- Promotional pictures and messages can be shown on the terminals – fast and direct delivery of promotion information to the customers
- Fast order confirmation by scanning barcode on order receipts – efficient ordering process
